

## Blood Type Percentages

There are many theories/beliefs about how humans came to be on Earth. Some people believe in the Creationist theories while others believe we we 'evolved out of Primordial ooze'. Well, today we are going to discuss a 3rd theory. I'm not asking you to automatically believe what you're about to read, but I am asking you to keep an open mind about it, and to research what I tell you. **YOU NEVER KNOW.**

Do you know your bloodtype? Every human on this planet has either blood type O, A, B, or AB, and within these types, you either have RH positive or RH negative blood. The Rhesus (Rh) factor refers to a specific antigen in the blood. If your blood lacks the Rh antigen, you are Rh-negative. If your blood has the antigen, you are Rh positive.

RH Negative blood types are one of the most fascinating subjects I've ever researched. In the study of genetics, we find that we can only inherit what our ancestors had except in the case of mutation. We can have any of numerous combinations of traits inherited from all our ancestors. Nothing more and nothing less. Therefore, if man and ape had evolved from a common ancestor, their blood would have evolved the same way. Blood factors are transmitted with much more exactitude than any other characteristic. All other earthly primates also have this Rh factor. So, if all mankind evolved from the same ancestor, their blood should be compatible. Do you get what I'm saying? I believe, (and many others including certain Scientists also believe) that RH Negative humans **DISPROVE** the theory of evolution! If we had all evolved from Apes or Monkeys, we would all have the same blood. We don't! RH Positive blood can be traced back to the Rhesis monkey and all other primates, but RH negative blood **CANNOT**. In fact, it cannot be traced anywhere else in nature.

When the mother is Rh negative and the father is Rh positive, the fetus can inherit the Rh factor from the father. Thus making the fetus Rh positive as well. If that happens, an RH negative Mother may abort the fetus. Why? For the same reasons you can't mate a Mule with a Mule to create another Mule. Just like you can't breed a pair of Ligers to produce another Liger. All animals and other living creatures known to man can breed with any other of their species. Relative size and color makes no difference. But, you cannot breed two mixed species together. If you do, you get something called Haemolytic disease. This is the allergic reaction that occurs when an Rh negative mother is carrying a Rh positive child. Her blood builds up antibodies to destroy an ALIEN substance (the same way it would a virus), thereby destroying the infant. Why would a mother's body reject her own offspring? Nowhere else in nature does this occur naturally. This fact alone points to the distinct possibility of a cross-breeding between two similar, but genetically different species.

The thing is, hardly anyone has tried to explain where the Rh negative people came from. Most people familiar with blood factors, assume these people must be a mutation if not descendants of a different ancestor. If we are a mutation, what caused the mutation? Why does it continue with the exact characteristics? Why does it so violently reject the Rh factor, if it was in their own ancestry? Who was this ancestor? Difficulties in determining ethnology are largely overcome by the use of blood group data, for they are a single gene characteristic and not affected by the environment.

The Basque people of Spain and France have the highest percentage of Rh negative blood. About 30% have Rh negative blood and about 60% carry one RH negative gene. The average among most people is only 15%-Rh negative, while some groups have very little. The Oriental Jews of Israel, also have a high percent Rh negative, although most other Oriental people have only about 1% Rh negative. The Samaritans and the Black Cochin Jew also have a high percentage of Rh negative blood, although again the Rh negative blood is rare among most black people. The origin of the Basques is unknown. Their language is unlike any other European language. Some believe that Basque was the original language of the book of Genesis. Some believe it was the original language of the world and possibly, of one of the ancient ET races.

Here are some commonly found traits of RH Negative people:

- A feeling of not belonging
- Truth seekers
- Sense of a "Mission" in life
- Empathy & Compassion for Mankind

An extra rib or vertebra.  
Higher than average IQ  
ESP Ability  
Love of Space & Science  
More sensitive vision & other senses.  
Increased of psychic/intuitive abilities  
Cannot be cloned  
Lower body temperature  
Higher blood pressure (some say lower)  
Predominantly blue, green, or Hazel eyes  
Red or reddish tint to hair color  
Increased sensitivity to heat & sunlight  
Unexplained Scares  
Piercing Eyes  
Tend to be Healers  
Empathetic Illnesses  
Ability to disrupt electrical devices  
Prone to Alien Abductions  
Experience unexplained phenomenon  
Physic Dreams and/or Ability

Here are some commonly found Personality Characteristics. (According to the Japanese who take this very seriously in their culture, a persons RH factor makes no difference when it comes to personality characteristics.. So, even RH Positive blooded people, may exhibit the same personality characteristics of RH Negative people with the same bloodtype.)

Type O- You want to be a leader, and when you see something you want, you keep striving until you achieve your goal. You are a trend-setter, loyal, passionate, and self-confident. Your weaknesses include vanity and jealousy and a tendency to be too competitive.

Type A- You like harmony, peace and organization. You work well with others, and are sensitive, patient and affectionate. Among your weaknesses are stubbornness and an inability to relax.

Type B- You're a rugged individualist, who's straight forward and like to do things your own way. Creative and flexible, you adapt easily to any situation. But your insistence on being independent can sometimes go too far and become a weakness.

Type AB- Cool and controlled, you're generally well liked and always put

people at ease. You're a natural entertainer who's tactful and fair. But you're standoffish, blunt, and have difficulty making decisions.

Comment from the Admin: I wanted to share my opinion on this subject since it's one of my favorites to discuss. Personally, I believe RH negatives are the survivors of Atlantis and/or Lumeria. (It would also explain the Basques and RH negative Egyptian mummies) I have always had a strange life. I have been able to see ghosts and UFO's since I was a kid. I'm also abit clairvoyant, and I share many of the characteristics mentioned above. When I first read about RH Negative humans, I sensed I was RH negative too. When I started researching the personality characteristics of RH negative people, I was even more sure of it. The personality characteristics of people with O, B and AB blood sounded nothing like me whereas the RH A negative characteristics sounded just like me. I just knew I was RH A Negative, but I had to be sure. So, I donated blood. 3 weeks later, I found out that I am INDEED, A Negative. I realize this is hard to digest, but I do hope you research it further. I believe there is far more about our history than what meets the eye. The only way we will uncover how we really got here, is by looking at ALL the evidence and by keeping an open mind. Remember, Fact is often stranger than Fiction.

**Additional Info:**

Make sure you check out this link! It's got lots of great info on it.

Here is the RH Negative Registry Site. Its AWESOME. Seriously. You gotta join to have full access, but it well worth it. Lots of great stuff on there.
